NATURAL INCREASE IN POPULATION

- The natural increase in population for the Reservation is figured by the number of births, minus the number of deaths that occur each year. The natural increase represents only part of the population increase. (The increase as a result of migration is not represented.)

Natural Increase in Population 1999 to 2003

	1999	2000	2001	2002	2003
Births	97	93	93	85	89
Deaths	44	36	40	32	32
Natural Increase	53	57	53	53	57

*Source: Wisconsin Births and Infant Deaths

- In 2002 there were a total of 44 males born and 41 females. The Crude Birth Rate for the year was 18.5 and the General Fertility Rate was 90.1.

Note: The crude birth rate is the number of resident live births divided by the resident population times 1,000. The general fertility rate is the number of resident live births divided by the number of females ages 15-44 times 1,000.
